

KidGopher™

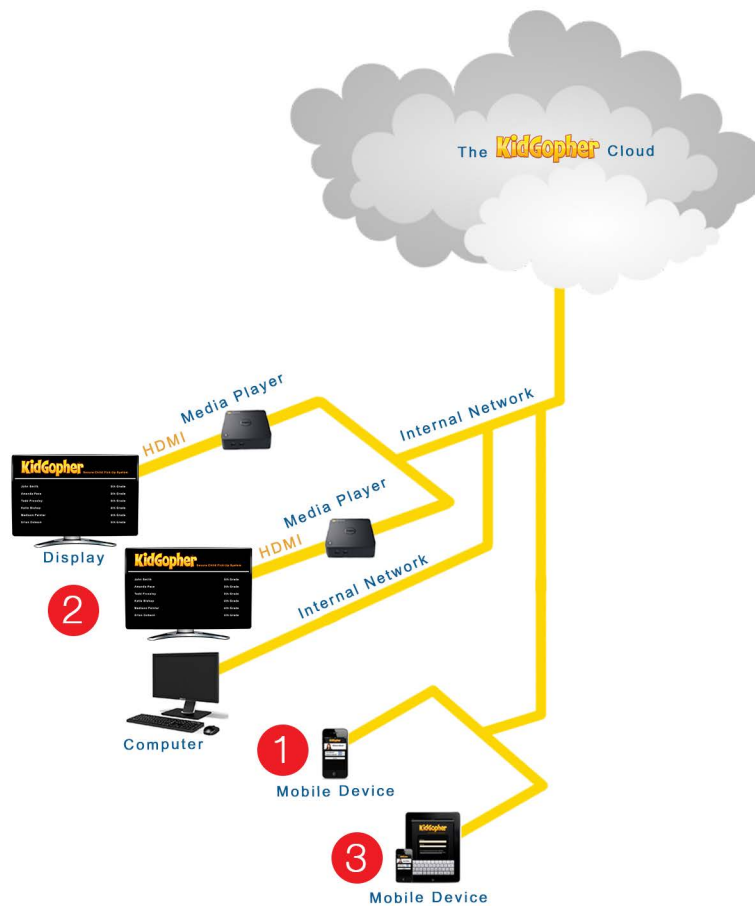

powered by Hypersign

The award winning solution that provides secure and efficient child pick-up!

Teachers and administrators agree that **safety** concerns are highest during afternoon pick-up. That is why we developed **KidGopher**, a **secure child pick-up system** that validates the identity and authorization of each guardian using electronic authentication technology and photo identification. KidGopher uses handheld mobile devices to confirm the appropriate guardian. Then, the verified data is translated via wireless network to digital displays where the children are waiting for pick-up.

“KidGopher provides a way to be certain every adult is who they say they are, and they are picking up only the children they are allowed.” - *Denise Barth, principal at Catawba Trail Elementary School*

With **KidGopher**, your school system has the ability to run this **award winning software** without having to manage a server. That’s because we host and maintain it for you on our secure server in the **cloud**. KidGopher has 99.9% system uptime and by utilizing this solution, it will reduce your expenses by eliminating the cost of additional hardware. KidGopher is based on an annual subscription, which ensures secure server hosting, all KidGopher software updates, and technical support.
